

CREATING A PAGE

Follow these steps to create new pages in Cascade CMS. If you have questions or require assistance, contact your trainer or visit <https://www.hannonhill.com/cascadecms/latest/>

1

Template

Required to build any page in Cascade CMS
Start with an ordinary HTML page
Customize with Cascade CMS-specific tags

```
<meta content="" name="author"/>
<system-page-meta-keywords/>
<system-page-meta-description/>
<title>
  <system-page-title/> | HH Training Workshop
</title>
<!-- Bootstrap Core CSS -->
<system-region name="CSS LINKS"/>
```

2

Configuration

Specifies template and language used to build the page (e.g., HTML, PHP, JSON)

HTML + Add new Output

Name *
HTML

Default Output

Type of Data *
HTML

File Extension *
The extension is appended directly to the page name or .php
.html

Display Name

Title

Help Text

Visibility
 Inline Visible Hidden

This field is required

3

Metadata Set

Select a set of metadata fields to be used

Builder XML Fullscreen

Name *

Parent Container *
Data Definitions

WS2018Jan-sam22: Data Definitions

4

Data Definition

Build an end-user form for content input
Uses WYSIWYG editors, common form fields, and asset choosers

Configuration *

Choose Configuration

Metadata Set *
Choose Metadata Set

Type of Content
 Data Definition No Data Definition

5

Content Type

Combines Configuration, Metadata Set and Data Definition into one component
Can also specify a customizable WYSIWYG

6

Page

Choose page type from the 'Add Content' menu
Select the (+)button
